

Pedro Poole Prieto

Senior Software Engineer | Java/Spring Architecture | Applied AI | Technical Leadership

Malaga, Spain · +34 622 627 305 · pedropoolep@gmail.com · www.pedropoole.com · linkedin.com/in/pedro-poole-prieto

PROFILE

Senior Software Engineer oriented toward technical leadership, team coordination and adaptability in changing environments. Used to turning ambiguous requirements into executable plans, aligning technical and functional stakeholders, unblocking decisions and keeping delivery, quality and maintainability in focus. I combine architectural judgment, clear communication and advanced AI usage to accelerate execution without losing technical control.

EXPERIENCE

Software Architect & Lead Developer - Inventory Automation Platform

EasyShop · Self-employed · Feb. 2026 - Present · Remote

- End-to-end design of a beta platform for inventory control, restock automation and product rotation optimization.
- Full architecture ownership: domains, boundaries, data model, APIs, information flows and business rules.
- Advanced generative AI use to turn requirements into deterministic code, tests, technical contracts and reproducible pipelines.
- Scraping, ingestion, normalization, enrichment and deterministic matching of catalogs, stock, suppliers, prices and external sources.
- Decision mechanisms for restock, minimum stock, rotation and replenishment prioritization based on explicit rules.

Senior Software Engineer

NTT DATA · Full-time · Jul. 2025 - Present

- Technical coordination of critical energy-sector applications for supply, logistics, forecasting, inventory, payments and collections.
- Migrated ~60% of a legacy monolith toward microservices using hexagonal architecture.
- Extracted ~30 domains and designed/implemented ~500 endpoints, ~60 Camel routes, ~60 Artemis queues and ~100 batch processes.
- End-to-end implementation for Enagás of a supply security management solution: architecture, APIs and data flows.
- Migration to open-source technologies to improve maintainability, traceability and evolution capacity.
- Applied AI for development and operations: deterministic software, agentic workflows and internal incident self-resolution application.
- Internal code-generation tooling; improved efficiency of a 10-developer team by 30% to 40%.
- Onboarding, mentoring and technical supervision of junior and senior developers.

Developer

NTT DATA · Nov. 2023 - Jun. 2025 · 1 year 8 months

- Managed infrastructure and integration for Enel and third-party applications.
- Advanced use of Kubernetes, Docker, Kibana, SQL/NoSQL and Spring.
- International technical support in Spanish and English; supervision of CI/CD based on DDD.
- Built supervision applications that accelerated team processes by 20% to 30%.

Junior Developer

NTT DATA · Full-time · Nov. 2022 - Oct. 2023 · Seville · Hybrid

SKILLS

Architecture: microservices, hexagonal architecture, DDD, APIs, boundaries, distributed systems, data flows.

Backend/integration: Java 21, Spring Framework, Apache Camel, Apache ActiveMQ Artemis, PostgreSQL, SQL, NoSQL, batch.

Applied AI: generative AI, deterministic software, technical prompts, technical contracts, agentic workflows, incident automation.

DevOps/operations: Kubernetes, Docker, Kibana, CI/CD, observability, corporate integration.

Leadership: technical coordination, mentoring, onboarding, team supervision, international support.

EDUCATION AND LANGUAGES

Higher Degree in Web Application Development - IES Punta del Verde, Seville | 2020 - 2022 | Outstanding average grade; top of the class.

TEFL Certificate - Seville | 2020.

Digital Marketing Program - University of Illinois | 2018 - 2019.

Law Degree studies - Autonomous University of Madrid | 2012 - 2015.

Bilingual Spanish and English.
